### Student Learning Outcome:
**Identify SLO being evaluated.**

### Assessment Method:
- _____ exam
- _____ discussion boards
- _____ journal
- _____ oral presentation
- _____ field trip
- _____ other (describe below):

### Sample of students assessed/timetable for the collection of date:

### Describe the results of the assessment.

Concluding remarks: Of the 30 students that took the midterm, over 90% got the answer correct, 2% did not. Students were advised and reminded of the scientific method and natural science concepts and models and their relationship to the correct answer, this type of feedback will continue to be provided to students as they progress through the Environmental Studies program.
